

NOTRA at TMO – November 14

Several NOTRA members made the trek down to Springfield for a launch held by Tripoli Mid-Ohio.

Mark Coburn (left) flew his LOC/Precision Magnum clone Level 3 rocket on a test flight with a 75mm L1175 motor using NASSA K2 Fast propellant to 5780 feet.

Andrew Kleinhenz (below) poses with Mark, Gary Dickinson and Dave Sears with Andrew's L3 rocket.

Jim Siebyl (left) with his scratch built rocket "Purple Haze", which he flew on an AT L1000 motor going to an altitude of 6834 feet.

Andrew Kleinhenz and Dave Sears (below) pose with Andrew's Level 3 certification rocket before putting it on the pad.

Andrew Kleinhenz (left) flew his Level 3 confirmation rocket to an altitude of 8970 feet with an AT M1350 motor and a velocity of 1400 fps, which comes out to Mach 1.24!

Lift off! (below) The rocket was recovered undamaged.

The University School TARC Team (left) flight testing their competition prototypes, using AT F20w motors. Hopefully there will be an actual TARC competition in 2021.

We don't have any pics of Dave Sears flights, but he flew his "Darkstar" on a Research K900 Wimpy Red motor to 4900 feet. He then flew his LOC/Precision "Big Nuke" with a Research L800 Everclear motor to 5750 feet.
